Migration Counts

In the fall hundreds of thousands of waterfowl migrate through Oak Hammock Marsh. It is one of the major stops for many ducks, geese and shorebirds. It is a safe place for the birds to feed and put on fat for the next leg of the journey. Each year Manitoba Conservation does weekly estimates during peak migration of the number of waterfowl at Oak Hammock Marsh.

Ideally four teams of two are situated at four different corners of the Wildlife Management Area before dawn. They count the number of waterfowl leaving the marsh. The teams then gather later in the morning and combine the numbers to come up with the estimate.

Waterfowl Estimates							
2018							
	2-Oct						
Ducks	4 500						
Canada Geese	31 000						
Snow Geese	2 100
